

Color ME

HAPPY WINTER

RATS AND MICE make great pets. They quickly learn to recognize their owner and will come running out to visit when they see you.

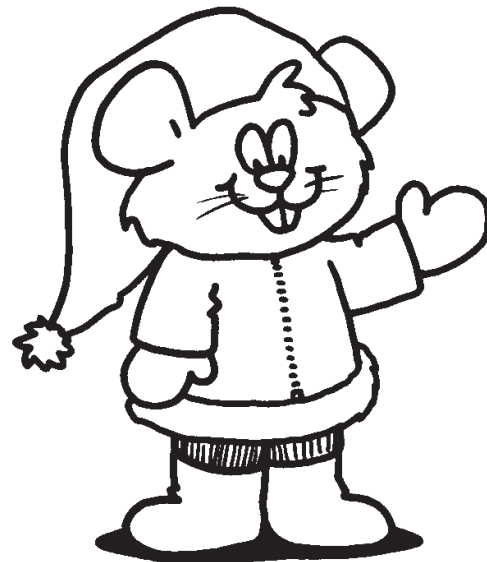

Rats and mice need homes of their own. Plastic and glass aquariums make great places for mice to live. Large aquariums and wire cages are great for rats.

It's very important to always have clean water from a water bottle and fresh food for your pet. The best kind of food is called Lab Blocks.

Rats and mice love special treats. Fruit is a great treat. They also love vegetables. Junk food is a no no!

Rats and mice hate it when their house is dirty. Make sure to clean your pet's cage at least once a week. Wash it out and fill it with fresh bedding. Never use cedar or pine shavings though . . . they'll make your rat or mouse sick.

Toys are a great way to make your critters home much more interesting. You can buy toys at the pet store or make your own.
