

Six Weeks and Pregnant?!

This pregnant rat had 14 babies the day after this photo was taken.

Female rats can get pregnant at just 6 weeks old!

Even though they may look like babies, rats may get pregnant very young and should not be bred this soon. They may not be able to raise a litter successfully at this age and it may stunt their growth.

For more information, check out the AFRMA web site www.afrma.org/rmindex.htm.
